SOME GIROUX ORF

International Smelter Is in Need of the Resources of Property.

EAST DISCUSSES

GIROUX POLICIES

Mine Worthy of Being Termed Modern Copper Property in All Respects.

The following discussion in regard to the Giroux Consolidated company is from recent bulletin of Thompson, Towle

A large interest in Giroux Consolidated says in regard to that company's develor lack of development, of its purphyry properties in the Ely camp;

porphyry properties in the Elv camp.

The Giroux management, while not developing its low-grade disseminated ore bodies after the manner of the Nevada Consolidated, Ray, Chino and other properties of like nature, has put down sufficient drill holes over a wide area to determine to the full satisfaction of the management that they have one of the largest bodies of disseminated ore in the country, and when the proper time comes the management will develop this ore, but it now has work enough shead in developing its limestone deposits, from which it expects large results. Giroux has yet to meet with a single disappointment.

Thomas F, Cole may not lay as great

has yet to meet with a single disappointment.

"Thomas F, Cole may not lay as great stress upon the accuracy in determining ore deposits by the churn drill as do some other mining interests, whether rightly or wrongly, which may account for the delay in Giroux's development of its porphyry deposits, but I have yet to hear, however, of a failure to prove up churn drill results from actual underground work.

"Giroux will soon demonstrate the faith of Mr. Cole and his associates in the Ely limestone, and shipments will probably be rushed, as the International Smelter in Utah will need these limestone ores to make up for the deficiencies of the Utah Consolidated, and Giroux is apparently the only available contributor."

Our Ely correspondent reports: "It was officially stated some time ago that the Giroux churn drills would discontinue work at the approach of cold weather. The plans of the company in this regard have evidently been chanved, for the pipe line which supplies the drills with water has been buried below the frost level and preparations are being made to continue drilling all winter on the property of the Butte & Ely company, which is controlled by the Giroux."

NEW IRON BLOSSOM ORE MAY BE SHIPPED

Hope has been aroused among local stockholders of the fron Blossom company that the new ore on the 500-foot level of the No. 3 shaft will prove to be more acceptable to the smelters than the No. 1 shaft silicious product, for which no market considered adequate by the management has as yet been provided. The increased value of this new ore especially the silver content, will without question provide a different basis for an ore contract than the No. 1 shaft rock.

Should the tonnage prove equal, and should a good contract be secured, many believe the directors will see their way clear to a continuation of dividend payments starting again with the January meeting of the board. It is understood that the company was assessed \$6 per for for treatment charges on the No. 1 shaft silicious rock, which the smelting company increased to \$7 per ton. This increase caused the cessation of shipments and created the impression that the ore could be more profitably treated by the cyanide process in a mill to be installed.

TONOPAH MINING POSTS EXPECTED DIVIDEND

The directors of the Tonopah Mining company on Friday declared the regular quarterly dividend of 25 cents a share, and an extra 15 cents, which is payable on January 21. This will give the stockholders a total of \$400,000, which brings the total dividends paid by the company to the handsome sum of \$6,850,000.

NEW MINE ENGINEERING PARTNERSHIP IS FORMED

Captain Duncan MacVichie and E. E. Price, the well-known mining engineers, have announced the formation of Mac-Vichie & Price to carry forward a mine engineering business in Salt Lake City. The firm has offices in 407 Newhouse building.

Ore and Bullion. The ore and bullion report for Friday, given by McCornick & Co. was as follows: Ore received, \$40,000; bullion shipped, \$40,000; total, \$50,000.

OHIO COPPER WEAK

Financial Difficulties Still Evidently Are Not at Their End.

The weakness in the market value of the Ohio Copper stock was emphasized ooth in the east and on the local market Friday, and as usual in such cases all kinds and sorts of rumors were given explain this condition. Local stock olders believe with a firm conviction that there is nothing wrong with the company as far as the western end of the proposition is concerned, that the mine and mill are doing their work without a hitch, and that December's tonnage will prove to be the best on the average of any month of 1910.

prove to be the best on the average of any month of 1916.

All the trouble seems to be the financial end. The stock is lacking support in the cast, and doubtless more or less of it keeps coming out upon the market which has served as collateral. The future of this proposition naturally depends upon the success of the officials in securing the funds to place the mill in its proper completed condition and for meeting its debts properly. It has been a very trying period to finance any kind of a proposition, but stockholders are not to be blamed for squirming uncomfortably at the inability of the Ohio to raise all the money needed when they see so many other copper propositions calling for and getting all the capital they need for equipment and development purposes.

FEW FEATURE ISSUES ON LOCAL EXCHANGE

There was no special net change in the local market situation on Friday, although the issues showing weaker tendencies were more numerous than those which appreciated in value. A total of 62,484 shares of stock sold, the market value of which was \$11,05.06. The following were the closing unlisted and listed stock transactions:

ONE MORE PHASE LOWER MAMMOTH ON MARKET FRIDAY OF LARGE MERGER

Combination Likely Will Be Centered on the Selling End of Copper.

WILL BE NUMEROUS MINE MERGERS, TOO

East Beginning to Doubt the Efficacy of the Copper Curtailment.

lessened that the programme of copper betterment involves a shortening of the reins by consolidating several of the newer red metal propositions, thus providing a limited number of powerful producing groups, there are many who believe the real merging of interests will not contemplate so much the physical as the selling end of the industry.

It is pointed out that the principal producers can form at least two agen-cles, the functions of which would be to handle the greater portion of, if not the total, production of the metal. These agencies will be composed of interests representing each of the controlling factors of the producing end, giving all an equal opportunity for benefits. To conequal opportunity for benefits. To control the price and the amount of metal to be disposed of these agencies may have the authority to control the output as well, but this phase involves intricacies which, at this early stage, are uselessly discussed. It is plain, however, that it will be no easy matter to regulate the output of metal, and at the same time please everyone from stockholder to president.

The east is beginning to doubt the ef-

same time please everyone from stockholder to president.

The east is beginning to doubt the efnicacy of the curtailment programme.
The Wall Street Journal says the net
result of the movement of copper metal
for the current calendar year to December 1, has been a decrease in world's
visible stocks of about 6,38:,000 pounds.
Of this decrease the United States contributed 11.377.000 pounds and the foreign visible. 51.000,000 pounds. The totel decrease is equivalent to approximatchy 16 per cent of world's stocks as
of January 1 last.

November's failure to show more than
a nominal reduction in production was
a disappointment to the trade and the
impression is creeping in that the much
talked of production curtailment is something of a failure, or at least so far as
the substantial results that were expected to accrue, are concerned. The
average daily production for 1910 to August 1, the latter date being the time
when curtailment is supposed to have
begun, was 3.944.098 pounds. A curtailment of 15 per cent would have reduced
the average daily rate to 3.424,434 pounds,
but as will be seen in the following table
production has not as yet come anywhere
near that level:

	110111 11011 101011		•

		* *	*
	*Deliveries over production.		

Nineiy days was the time allowed for mine reduction to show in refined copper output, and that time has already clapsed without any more than a nominal effect on the refined output. Allowing for all possible contingencies, such as atocks at the refineries, imports, etc., it would appear that if the curtailment does not appear in the December statistics the trade may as well make up its mind that cupper production has about reached its low level, except for such faling off as usually comes with cold weather.

As a whole the showing for 1310 to date has been much better than was thought possible a year ago. If next year shows the same ratio of improvement the copper trade will have nothing to fear from whatever impending increase in production there may be.

Second and Tenth Levels in Country That Gives Promise of Results.

The Lower Mammoth looks mighty 20001 right now, and keep your weather eye on that part of the map.

The above statement was made by a well known Tintic operator Friday. He had been in the camp recently, and knows from a personal investigation whereof he speaks. He states also that the 1000 level is looking very encouraging, and these two levels will bear confidence. The 200-foot level, it will be recalled, is between 400 and 500 feet in depth from the surface, so a discovery of ore in this new territory will be an important matter.

18-20 EAST FIRST SOUTH

THE SELLING SIDE James A. Pollock & Co. bankers and brokers, furnished the following, received over their private wire yesterday afternoon:

Paine Webber & Co. Letter, Boston—The general market was duller than any day this week. There was absolutely no fluctuations to cause any speculation and traders were content to wait for new developments. Prices on the local board were unchanged from last night, only a few transactions being recorded in any of the stock. All the branches of business seem to be adopting a waiting attitude until such time as the courts may define the position of the trusts, or until the railroads see their way clear to make the extensive improvements which they have in mind.

Cise	ness seem to be adopting a waiting at-	metal values. This organ	nzalion Cla	Should	1.

—come to Frank's -the store where your dollar will go farthest

In spite of the heavy selling during the past three weeks we find that our stocks are still large and complete. We've entirely too many garments for men and women. They are all bright and snappy-made for stylish dressers who seek style as well as an economizing price. If this is what you're looking for, you're looking for this store.

YOUR CHRISTMAS GIFT

APPROPRIATION IS

LIMITED

Ladies' Suits, Coats and Dresses

Our prices on these garments are positively the lowest in the city. Therefore what's the logic, from any viewpoint, of paying more than the price we ask? This is good material for thought. Think it over.

\$20.00 garments	\$7.95	\$30.00 garments	\$11.95
\$25.00 garments	\$9.95	\$35.00 garments	\$14.95
\$27.50 garments	\$10.95	\$10.00 garments	\$16.95

Men's Suits and Overcoats

When you pay more than the prices we ask for men's suits or overcoats, you are paying an additional problematical quantity of price that you'll never have a chance to utilize. Why pay more?

\$9.65 | \$25.00 suits or \$13.65 \$18 00 suits or \$12.50 suits or \$5.65 \$11.65

Thousands of articles suitables as Christmas gifts are here aplenty
